RECENT DEVELOPMENT PROJECTS

Dungeon Escape| GitHub

- First personal project that is a terminal-based game
- User chooses between 3 options with consequences in each floor, 10 floors total, to escape the dungeon. Used random number generator to have 3 different results along with using switches and cases for the scenarios.

Technologies Used: C#

Dungeon Escape (enhanced)| GitHub

- Took my original Dungeon Escape game to another level with a different language
- Evovled from terminal-based to Web-based interactice clicking game
- Used sprite images along with hover effect to give animation effects
- Used a shuffle algorithm to give a proper random effect when user chooses their options when choosing a set of number of choices.
- UI shows player which floor they are in and what their health is at all times constantly being updated as the player chooses their options.

Technologies Used: React, MongoDB, Express.js, Node.js, Mongoose, CSS
